

[Insert title of invention] Ergonomic Scraper

Abstract of Disclosure

A scraping tool employing a sharp-edged blade comprising a top, bottom, door, carrier, blade, storage box and an ergonomic base grip. The top, bottom and base grip combine to form the scraper tool body. The blade is attached to the carrier which is contained within the body and slides back and forth allowing the blade to be exposed. The storage box is contained within the body and can be used to store spare and used scraper blades.
